

SMARTBRIDGE PROJECT SUBMISSION
Auto Ticket Classification using Flow Designer

PHASE 6

Project Testing

Date	29 September 2026
Team id	SWTID-2026-9204
Team Leader	M.Ajees Tharik
Team Members	P.Mohamed Afsal,S.S.Vishal,V.Pradeep Mon
Project name	Auto Ticket Classification using Flow Designer

1. Testing Objective

The objective of testing is to ensure that the developed Auto Ticket Classification system works correctly and produces the expected results.

2. Test Scenarios

Test Input	Short Description	Expected Category	Expected Subcategory
1	WiFi not working in library	Network	Wi-Fi
2	Projector not turning on	Hardware	Projector
3	Forgot password for login	Access	Forgot Password
4	Computer is slow and hanging	Performance	Slow Computer

3. Supplied Testing Evidence

The supplied screenshot shows the Incident Workflows list after ticket creation. The records display automatically assigned Network category values for network-related test descriptions.

The screenshot shows the ServiceNow 'Incident Workflows' table. The table has columns for Number, Caller, category, subcategory, State, Assigned Group, Assigned to, Short Description, and Description. Three records are visible, all with 'Network' as the category. The first record (INC0001003) has 'Abel Tutor' as the caller and 'Network not working in library' as the short description. The second record (INC0001005) has 'Abraham Lincoln' as the caller and 'Network issue' as the short description. The third record (INC0001007) has 'Abel Tutor' as the caller and 'Network not working in library' as the short description. The 'Assigned Group' and 'Assigned to' fields are empty for all records.

Number	Caller	category	subcategory	State	Assigned Group	Assigned to	Short Description	Description
INC0001003	Abel Tutor	Network			(empty)	(empty)	Network not working in library	
INC0001005	Abraham Lincoln	Network			(empty)	(empty)	Network issue	
INC0001007	Abel Tutor	Network			(empty)	(empty)	Network not working in library	

Figure 1. Incident Workflows records showing automatically populated Network category values for network-related tickets.

4. Validation Checks

- Ticket number is generated correctly.
- Category is automatically assigned.
- Subcategory is automatically assigned.
- Category and Subcategory values are correct.
- Email notification is generated.
- Ticket information is stored correctly.

5. Testing Result

The test scenarios are used to validate the end-to-end ticket classification and email notification process.

Note: Only the two screenshots supplied by the student are inserted in this submission. Additional test screenshots can be added later if available.
